

Coefficient accuracy by epoch budget

Absolute errors avoid cancellation between the two repetitions; lower values indicate closer estimates.

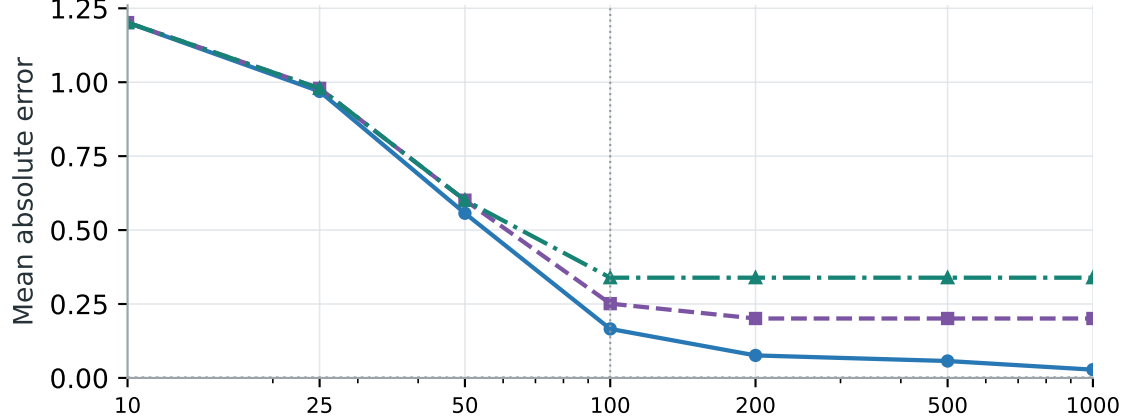

Case 1 | θ_1

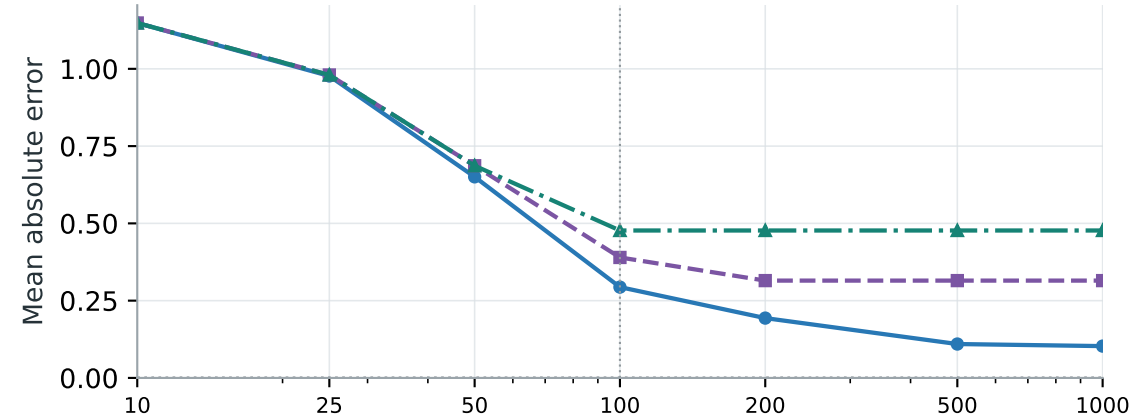

Case 1 | θ_2

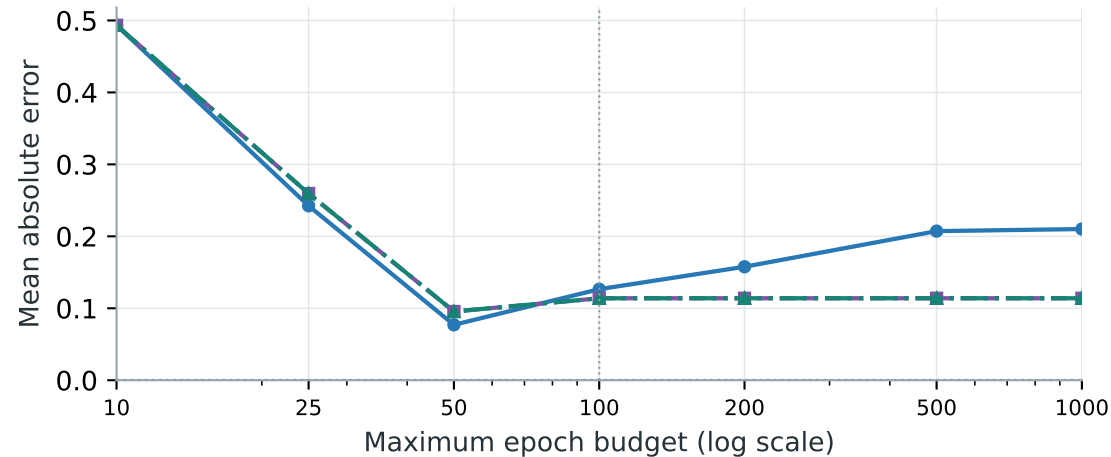

Case 2 | θ_1

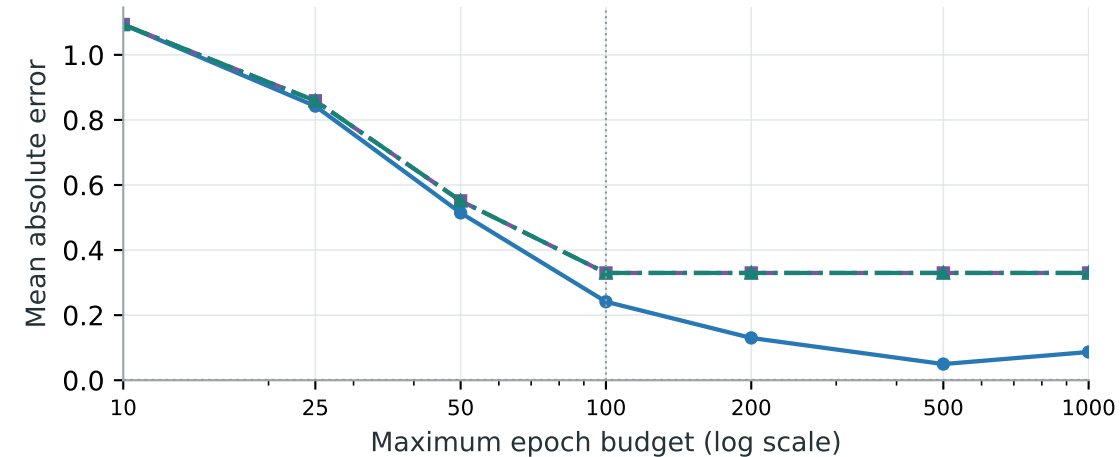

Case 2 | θ_2

Case 3 | θ_1

Case 3 | θ_2

At the final epoch Best validation epoch within budget Early stopping: patience 15

Two-repetition exploratory means; these are not precise Monte Carlo bias or robustness estimates.
