

Mean coefficient error by epoch budget

Signed error is the average estimate minus the true coefficient; opposite errors can cancel.

Case 1 | θ_1

Case 1 | θ_2

Case 2 | θ_1

Case 2 | θ_2

Case 3 | θ_1

Case 3 | θ_2

At the final epoch Best validation epoch within budget Early stopping: patience 15

Two-repetition exploratory means; these are not precise Monte Carlo bias or robustness estimates.
