

F. Individual continuous training paths

Q = 10 per case; n = 1000; tau = 0.5; one continuous path per replicate; no early stopping

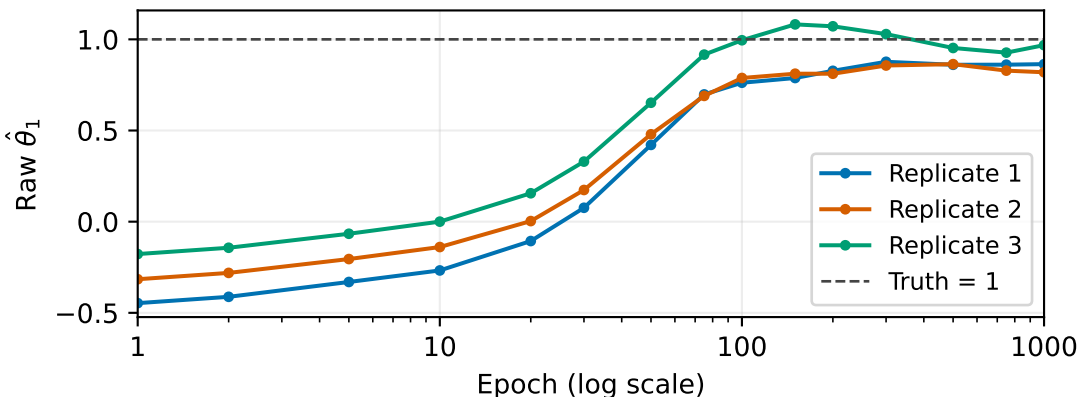

Case 1: linear

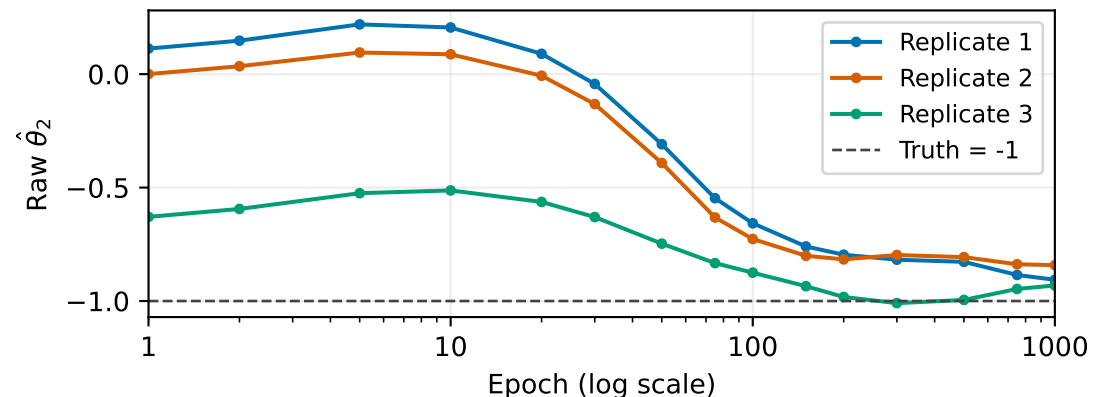

Case 1: linear

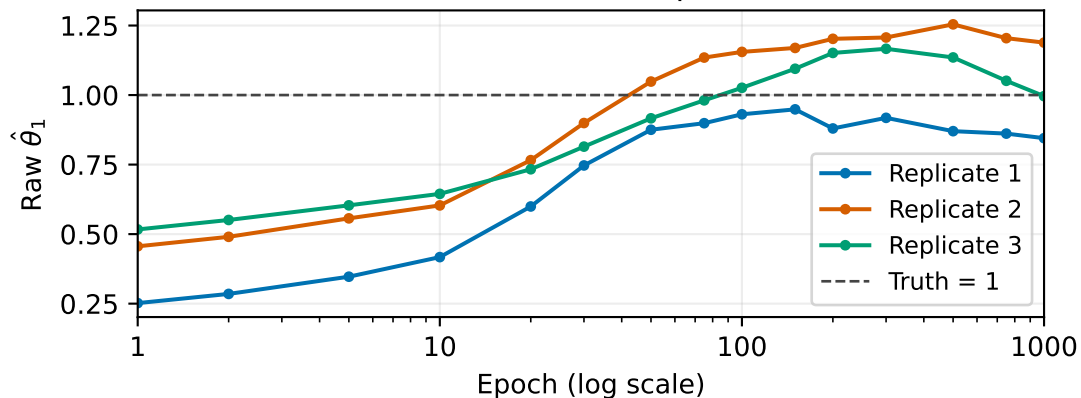

Case 2: additive

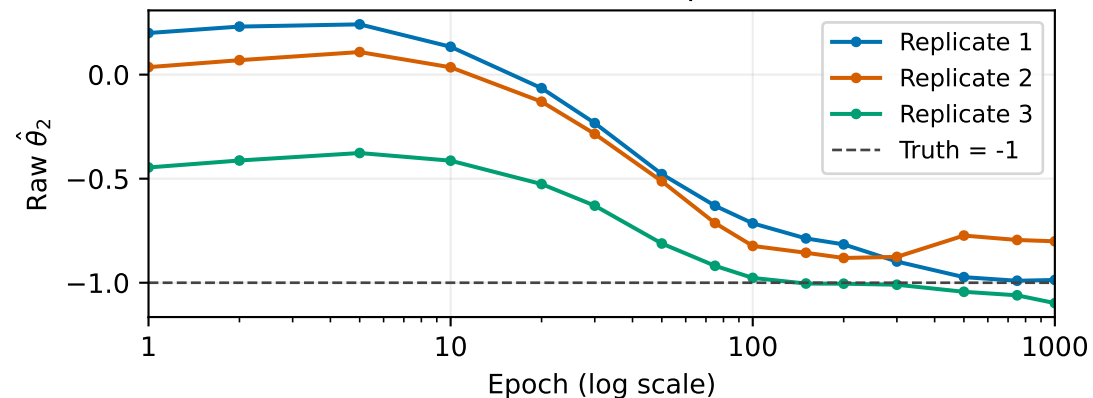

Case 2: additive

Case 3: deep

Case 3: deep

Replicates 1, 2, and 3, where available, are fixed in advance; no selection by observed drift. Monte Carlo summaries are primary.
